

Persistent Catalog Cache: Trust and Publication Protocol

The cache is an optional projection of a published database snapshot. It is verified local input, never catalog authority.

On-disk representation

globalStorage/metadata-cache/v1/

index.json (advisory listing/LRU; approximate across windows)

databases/<sfp_*>/<dbh_...>/

.publication.lock

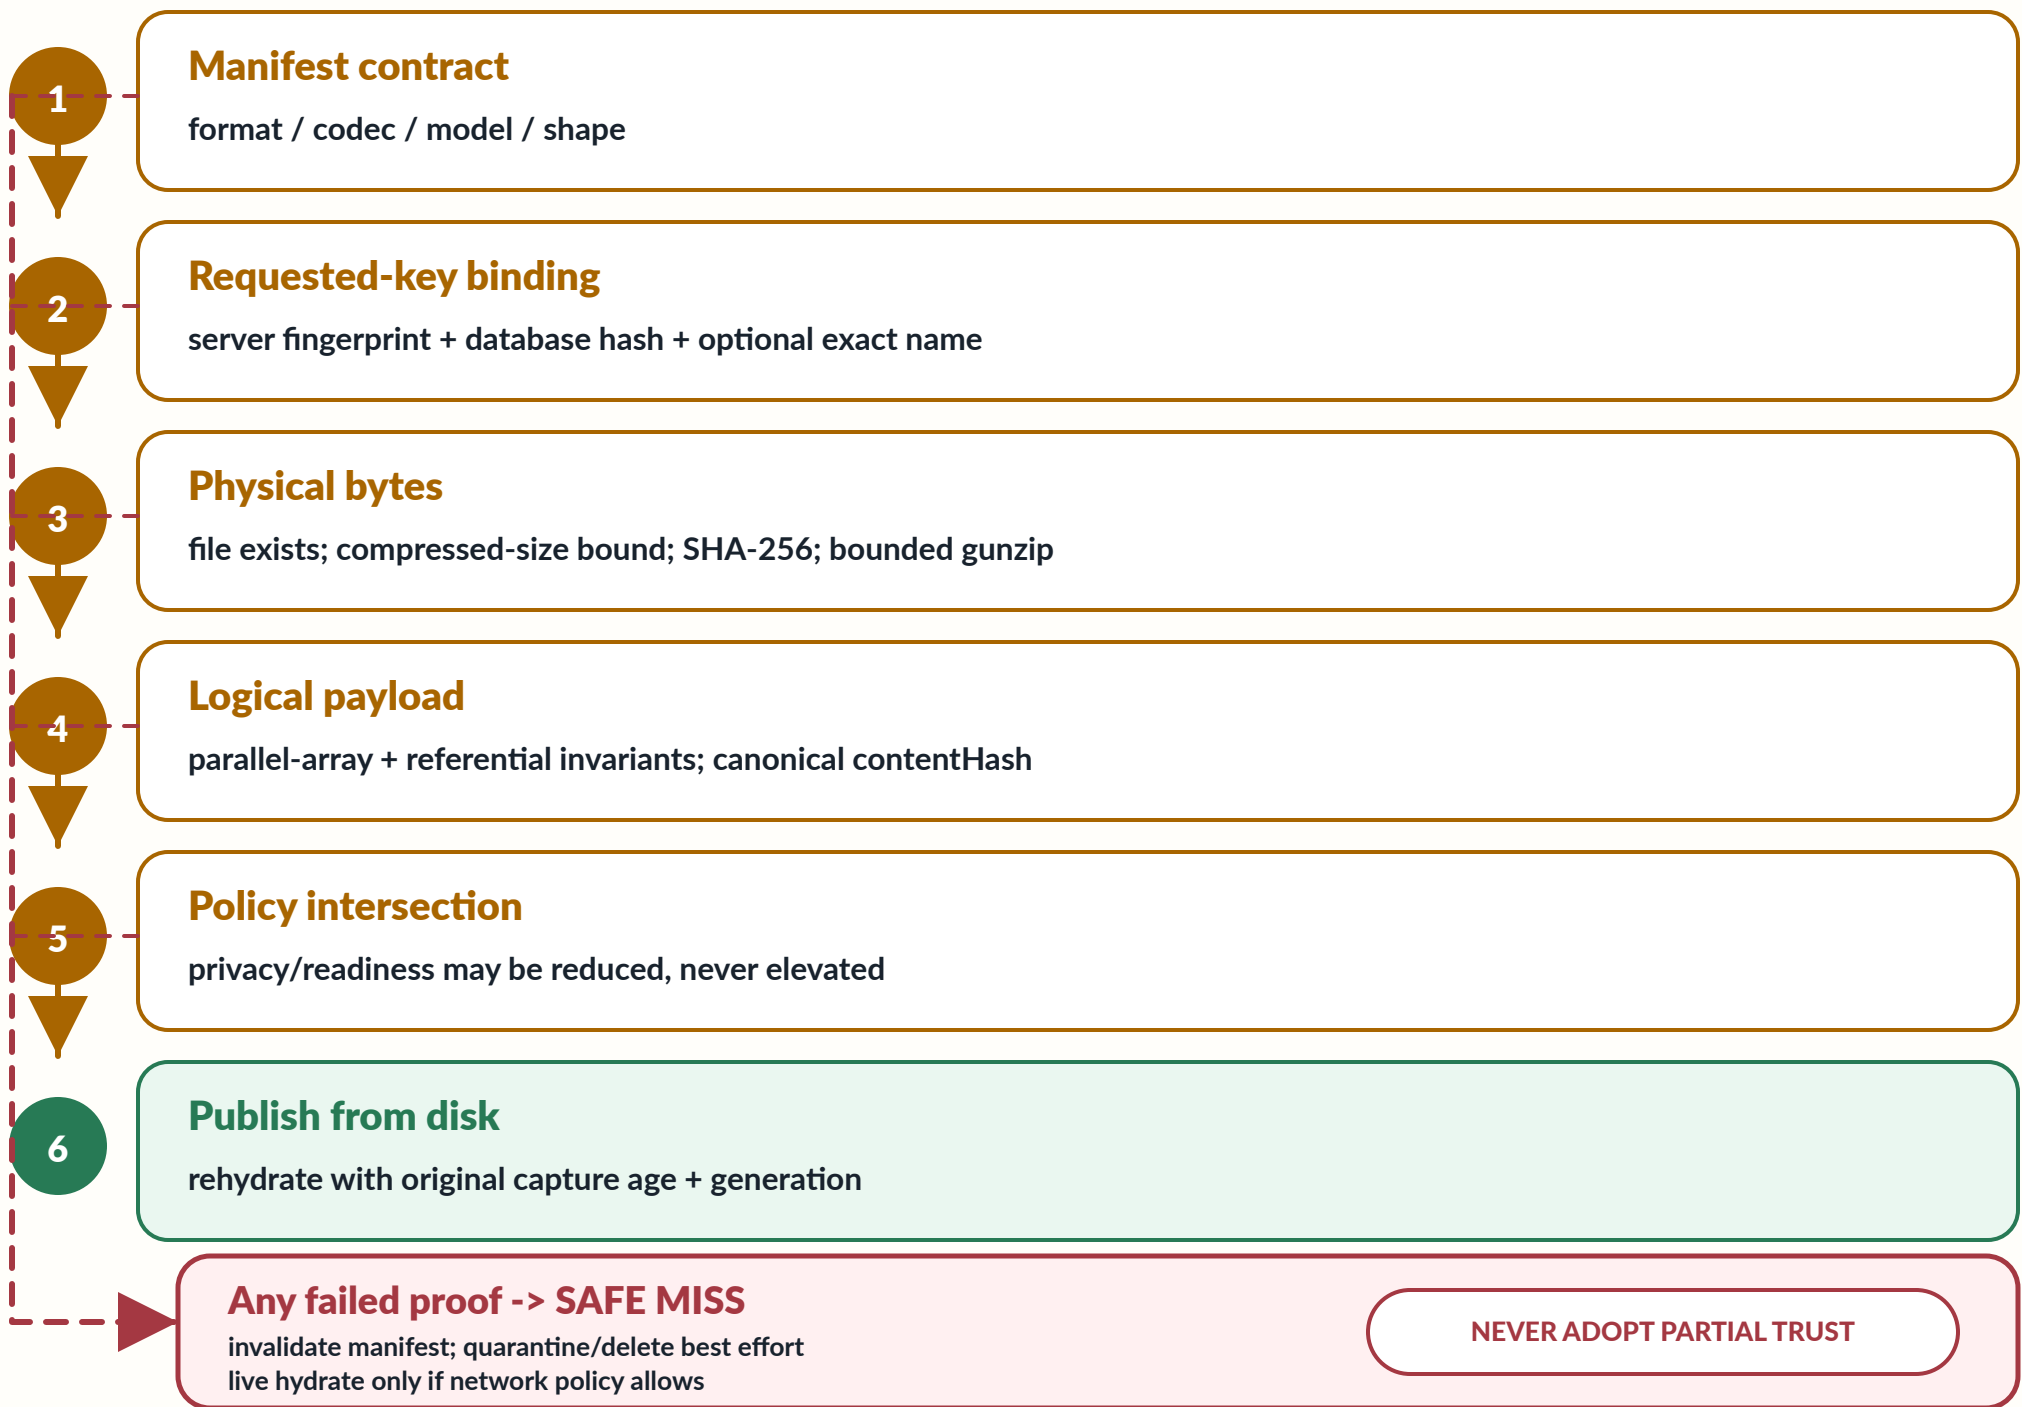

manifest.json

catalog.<compressed-sha256>.json.gz

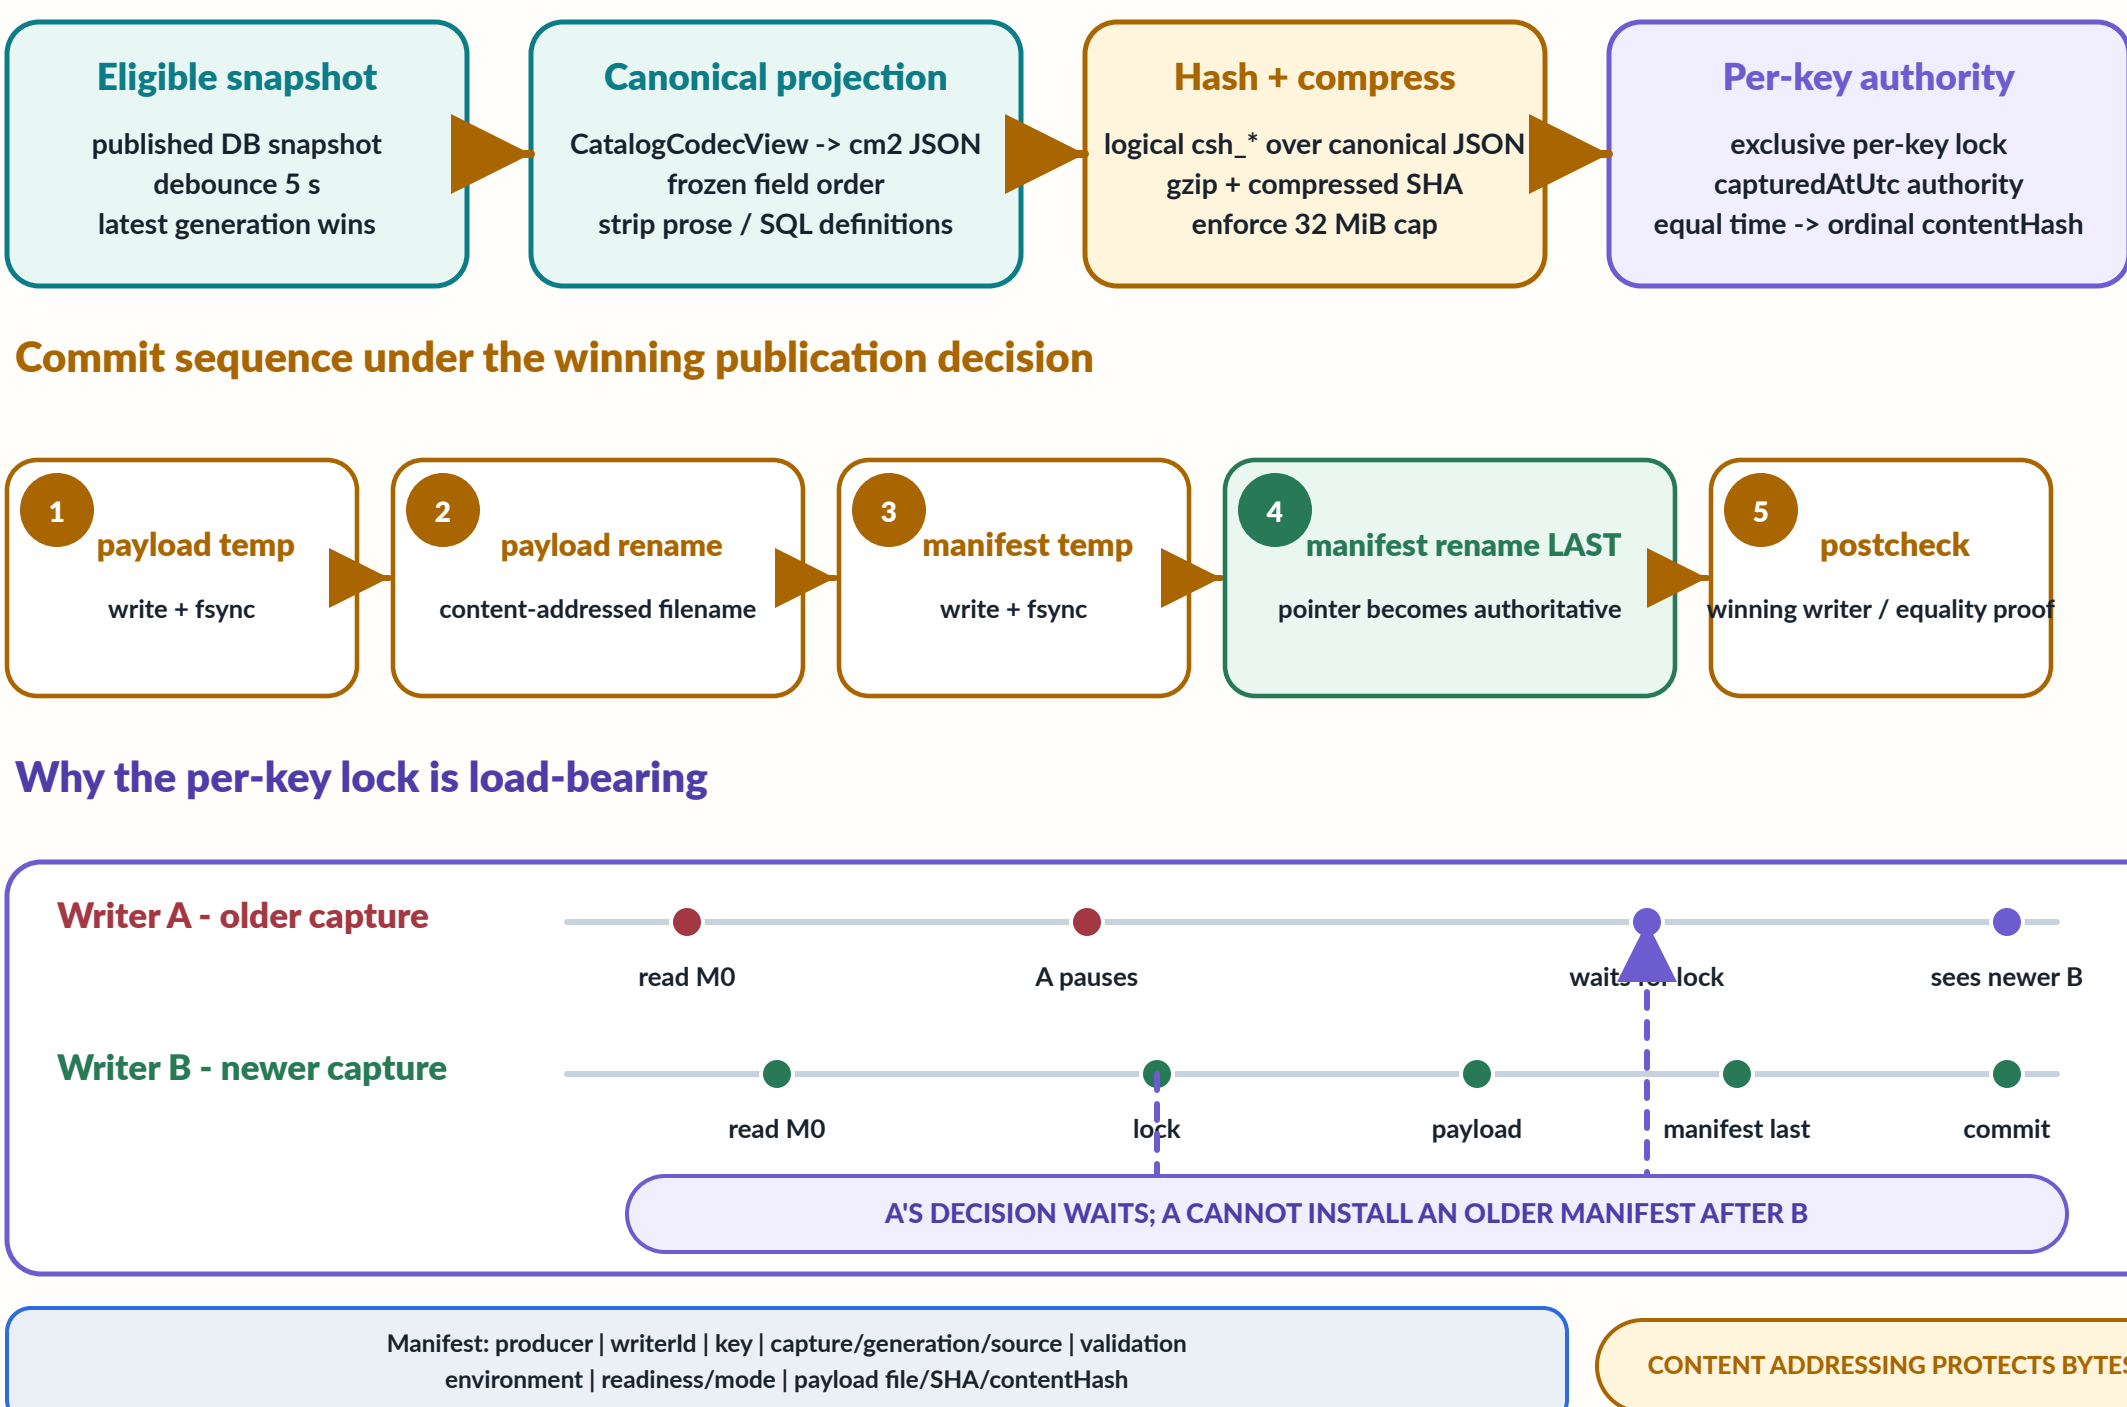

ONLY DATABASE SNAPSHOTS ARE PERSISTED

server catalogs and auxiliary sections remain live/lazy memory structures

Verified READ path

Atomic WRITE and cross-window authority

DEFAULT OFF

MAX AGE 14 DAYS

TOTAL 256 MiB

32 MiB COMPRESSED / ENTRY

ORPHAN GRACE 10 MIN

CLEAR MANIFEST FIRST; REMAINING BYTES ARE INERT
